Update to living WHO guideline on drugs for covid-19

This living guideline by Lamontagne and colleagues (*BMJ* 2020;370:m3379) has been updated. For the latest update, visit doi:. The latest version of this WHO living guidance does not include any changes to the strength or direction of recommendations, but rather has new data to support existing recommendations:

- The use of nirmatrelvir/ritonavir is now considered to be an option also for pregnant and breastfeeding women with non-severe covid-19
- Evidence of reduction of in vitro neutralisation activity supports the strong recommendations against the use of the neutralising monoclonal antibodies sotrovimab and casirivimab-imdevimab
